

# SBC Private Line (T1, DS3, Ocx)

## Private Line (Intralata and Interlata)

- “Classic” data product offering point-to-point connectivity between two locations.
- Speeds from DS1 (1.5 Mbps) to OC-12 (622 Mbps).
- Pricing - flat rated (not usage sensitive) / term and volume discounts
- Private Line = Secure Line. Where security of customer data is top priority

SBC Private Line Service is a digital point-to-point connection that provides a dedicated circuit of pre-subscribed bandwidth between any two points. Private Line Service lets your customer consolidate communications over one line—data, video, and multimedia.

Private Line Service offers several transport options with bandwidth ranging from 1.5 Mbps (DS1) to 622 Mbps (OC12). This gives businesses the speed they need while leaving room to grow down the road.

Unlike some types of transport, Private Line Service provides a versatile, digital conduit for all kinds of business-related traffic. Be it data or multimedia, Private Line Service can handle the variety.

With Private Line Service, your customer can get a complete end-to-end transport for their local and long distance communications needs. Certain applications may require the purchase of additional equipment. Your customer can buy this equipment from us, ensuring a seamless solution.
